

848. Which of the following is NOT one of the steps in the process of designing a new mission-critical IT facility?
- Risk Analysis
 - Implementation
 - Problem definition
 - Commissioning
 - Solution development
849. Which of the following is NOT a key characteristic in the planning to arrive at the Risk analysis?
- Identify the impact of downtime
 - Identify availability requirements
 - Identify the impact of building design
 - Identify operational requirements
850. After completion of the risk analysis, the facility should be characterized in terms of which of the following?
- Space
 - IT asset density
 - Anticipated availability requirements
 - All the above
851. Translate the facility program into one or more design solutions to solve the specific design problem and meet the objectives of the targeted availability Class, is a description of which of the following?
- Risk Analysis
 - Implementation
 - Problem definition
 - Commissioning
 - Solution development
852. Which of the following is defined as the relative importance of a function or process as measured by the consequences of its failure or inability to function?
- Seriousness
 - Criticality
 - Decisiveness
 - Risk analysis
853. The six considerations for protection of the environment, equipment, function, programming, records and supplies in a data center are defined in which of the following?
- ANSI/BICSI 002-2011
 - NFPA 70
 - NFPA 75
 - NFPA 2001
854. What is the key element to consider when identifying operational requirements?
- Time
 - Money
 - Equipment
 - Labor
